

Easy 3DFlex for Mixed Media

Easy 3D Flex is an incredible NEW medium that can be used to create the most AMAZING textural effects in your artwork. It is an inorganic filling compound, which comes as a powder. Mixed with Powertex, it makes a thick sculpting clay that air dries and gets rock hard. The medium will develop cracks when applied in very thick layers and exposed to heat, such as the sun, or by adding water or Bister to the surface. The thick sculpting paste can also be stamped to achieve detailed prints, using various items such as rope, screws, buttons & stencils... If desired, cracks can be avoided by applying the Easy 3Dflex in thin layers, with drying time in between, or by adding a small amount of white sand. It can also be used to thicken acrylic paint to achieve superb textural effects in painting. This product is natural and non-toxic, but can dry out the skin. We recommend using gloves.

Plaster Torsos

A diverse range of plaster torsos and heads are available from Powertex, that can be used to create your own artwork. Choose from the African, Masai, European & Hindi Collections.

Art Colour Pigments

Embellish you artwork with our beautiful range of coloured pigments. Use Powercolour or Colourtrix in combination with Easy Varnish to drybrush your artwork to create a professional finish with various effects such as a 'rust' or 'metallic' finish. Powercolour is a mat finish, whilst Colourtrix is metallic. Both are available in a wide range of colours.

Powertex the Verstile Textile Hardener

Powertex

Powertex is the versatile, environmentally friendly, weather resistant, water based, acid free, liquid textile hardener that is suitable for use with any porous material such as paper, fabric, cardboard, air-drying clay, concrete, ceramic, wood, glass, metal, dried flowers, etc...it works most effectively with 100% cotton.

If you like to recycle then you will love Powertex! Combine all the bits and pieces that you've been collecting for years (such as fabric scraps, old T-shirts, natural materials, paper, beads etc..) with a dab of creativity to create your own amazing artworks for indoors or outdoors. You name it and you can probably use it all...the sky is the limit with Powertex!!!

Powertex: Available in 10 colours including Transparent, Terracotta, Lead, Bronze, Ivory, Green, Black, Red, Yellow Oxide & Blue. Easy to use - dip it, spray it or paint it.

Add Powercolor Art Pigments to Powertex to create your own colours (40ml of Powercolor is usually required to colour 1 litre of Powertex).

Stone Art

Stone Art is like paper mache, except that it has a very specific composition so that when it's combined with Powertex it makes a self hardening clay that can be rolled, sculpted and moulded then allowed to air-dry. Stone Art sculptures may be rubbed and polished to obtain coarse or fine stone structures, with an identical stone imitation, including blue stone, bronze or terracotta. A beautiful crackle and torn paper effect can also be achieved by adding Powercolour to a slab of Stone Art.

Powerprint

Powerprint is an effective laser print transfer medium that transfers images from a laser printer or photocopier to canvas, paper, fabric, ceramic, cardboard, metal and Powertex treated surfaces. Powerprint images can be super-imposed for special effects and used effectively when combined with Powertex, collage, Stone Art, paint, etc... An essential for the toolkit of any mixed media artist!
